

Avalanche danger

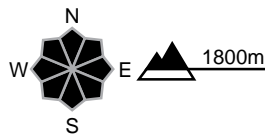

Forecast through: 2.1.2026, 17:00 / Next update: 2.1.2026, 17:00

Low (1)

Wind slab

Avalanche prone locations Danger description

The strong wind will transport the loosely bonded old snow. In the course of the day small wind slabs will form in some localities. These can be released easily. They are to be evaluated with care and prudence in particular in extreme terrain. Restraint should be exercised because avalanches can sweep people along and give rise to falls.

Danger levels

1 low

2 moderate

3 considerable

4 high

5 very high
