

Avalanche danger

Forecast through: 27.12.2024, 17:00 / Next update: 27.12.2024, 08:00

Considerable (3-)

Persistent weak layers

Avalanche prone locations Danger description

In isolated cases avalanches can be released in the old snowpack and reach large size. Caution is to be exercised in particular in areas where the snow cover is rather shallow, as well as at transitions from a shallow to a deep snowpack, when entering gullies and bowls for example. Backcountry touring and other off-piste activities call for experience in the assessment of avalanche danger.

Moderate (2)

Gliding snow

Avalanche prone locations Danger description

Small and medium-sized gliding avalanches are possible, in isolated cases also on very steep shady slopes. Areas with glide cracks are to be avoided as far as possible. On steep sunny slopes individual moist and wet snow slides are possible as the day progresses.

Danger levels

1 low

2 moderate

3 considerable

4 high

5 very high
