

Avalanche danger

Forecast through: 29.11.2023, 17:00 / Next update: 29.11.2023, 17:00

Snow drift

Avalanche prone locations

Danger description

The wind slabs of the last few days represent the main danger. The avalanche prone locations are to be found in particular in gullies and bowls, and behind abrupt changes in the terrain and generally at elevated altitudes. The avalanches can in isolated cases reach medium size. The wind slabs are to be evaluated with care and prudence in steep terrain.

The Avalanche Warning Service currently has only a small amount of information that has been collected in the field, so that the avalanche danger should be investigated especially thoroughly in the relevant locality.

Danger levels

1 low

2 moderate

3 considerable

4 high

5 very high
