

Avalanche danger

Forecast through: 27.12.2024, 17:00 / Next update: 27.12.2024, 08:00

No distinct avalanche problem

Avalanche prone locations Danger description

Avalanches can in some places be released by a single winter sport participant and reach medium size. These avalanche prone locations are to be found adjacent to ridgelines and in gullies and bowls and in little used backcountry terrain. Backcountry touring and other off-piste activities call for careful route selection.

Moderate (2)

Gliding snow

Avalanche prone locations Danger description

Small and medium-sized gliding avalanches are possible, in isolated cases also on very steep shady slopes. Areas with glide cracks are to be avoided as far as possible. On steep sunny slopes individual moist and wet snow slides are possible as the day progresses.

Danger levels

1 low

2 moderate

3 considerable

4 high

5 very high
