

Avalanche danger

Forecast through: 23.11.2024, 17:00 / Next update: 23.11.2024, 17:00

New snow

Avalanche prone locations

Danger description

The new snow and wind slabs of the last three days can be released by a single winter sport participant. Mostly avalanches are medium-sized.
High Alpine regions: Additionally avalanches can be released in near-ground layers and reach large size, especially on steep north and east facing slopes.
Backcountry touring and other off-piste activities call for experience in the assessment of avalanche danger.
The Avalanche Warning Service currently has only a small amount of information that has been collected in the field, so that the avalanche danger should be investigated especially thoroughly in the relevant locality.

Danger levels

1 low

2 moderate

3 considerable 4 high

5 very high
