

Avalanche danger

Forecast through: 30.4.2024, 17:00 / Next update: 30.4.2024, 17:00

Dry avalanches, whole day

Moderate (2-)

Wind slab

Avalanche prone locations

Danger description

As a consequence of a strong to storm force foehn wind, wind slabs formed in the last few days in particular at elevated altitudes. They can still be released in some cases. Avalanches can reach medium size in isolated cases.

The wind slabs are to be evaluated with care and prudence in very steep terrain.

Wet-snow avalanches, as the day progresses

Moderate (2)

Wet snow, Gliding snow

Avalanche prone locations

Danger description

As a consequence of warming during the day and solar radiation wet avalanches are possible as the day progresses. This applies in particular on steep sunny slopes below approximately 3000 m, as well as on north facing slopes below approximately 2600 m. Avalanches can reach medium size.

More gliding avalanches are possible, even large ones in isolated cases. Caution is to be exercised in areas with glide cracks.

Danger levels

1 low

2 moderate

3 considerable

4 high

5 very high
