

Avalanche danger

Forecast through: 12.2.2026, 17:00 / Next update: 12.2.2026, 08:00

New snow, Persistent weak layers

Avalanche prone locations Danger description

The fresh snow as well as the sometimes large wind slabs are prone to triggering. Avalanches can in many places be released easily or triggered naturally. They can penetrate deep layers and reach very large size in isolated cases. Exposed parts of transportation routes can be endangered. The snow sport conditions outside marked and open pistes are very critical.

Moderate (2)

Wet snow

Avalanche prone locations Danger description

Wet snow slides and avalanches are to be expected as a consequence of the rain, in particular on very steep slopes. These can reach medium size. Apart from the danger of being buried, restraint should be exercised in particular in view of the danger of avalanches sweeping people along and giving rise to falls.
