

Avalanche danger

Forecast through: 1.4.2025, 17:00 / Next update: 1.4.2025, 08:00

Wind slab

Avalanche prone locations Danger description

As a consequence of bise wind, mostly small wind slabs will form in some places. The fresh and somewhat older wind slabs are to be evaluated with care and prudence in very steep terrain. Apart from the danger of being buried, restraint should be exercised in particular in view of the danger of avalanches sweeping people along and giving rise to falls.

Moderate (2)

Wet snow, Gliding snow

As a consequence of warming during the day and solar radiation medium-sized and, in isolated cases, large wet and gliding avalanches are possible. This applies especially on steep sunny slopes below approximately 2600 m, as well as on steep shady slopes below approximately 2200 m.

Danger levels

1 low

2 moderate

3 considerable

4 high

5 very high
