New snow, Wind slab

Avalanche prone locations Danger description

As a consequence of new snow and a strong wind from westerly directions, avalanche prone wind slabs will form. Avalanches can be released by a single winter sport participant. They can in isolated cases penetrate deep layers and reach quite a large size. Backcountry touring calls for experience in the assessment of avalanche danger.

Moderate (2)

Wet snow

Avalanche prone locations Danger description

Wet snow slides and avalanches are to be expected as a consequence of the rain, in particular on very steep slopes. These can reach medium size. Apart from the danger of being buried, restraint should be exercised in particular in view of the danger of avalanches sweeping people along and giving rise to falls.
