

Avalanche danger

Forecast through: 15.4.2026, 17:00 / Next update: 15.4.2026, 17:00

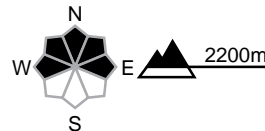

Dry avalanches, whole day

Low (1)

No distinct avalanche problem

Avalanche prone locations

Danger description

Dry avalanches are unlikely to occur. Very isolated avalanche prone locations are to be found in particular on extremely steep shady slopes at elevated altitudes.

Wet-snow avalanches, as the day progresses

Moderate (2)

Wet snow

As a consequence of warming during the day and solar radiation wet and gliding avalanches are possible, even medium-sized ones. The avalanche prone locations are to be found in particular on west, north and east facing slopes.

Apart from the danger of being buried, restraint should be exercised as well in view of the danger of avalanches sweeping people along and giving rise to falls.

Danger levels

 1 low

 2 moderate

 3 considerable  4 high

 5 very high
