Avalanche danger

Forecast through: 1.4.2025, 17:00 / Next update: 1.4.2025, 08:00

Wind slab

Avalanche prone locations Danger description

The more recent wind slabs are prone to triggering. They can be released, even by a single winter sport participant. The avalanche prone locations are to be found in particular in gullies and bowls, and behind abrupt changes in the terrain. Mostly avalanches are medium-sized.

Backcountry touring and other off-piste activities call for experience in the assessment of avalanche danger.

Moderate (2)

Wet snow, Gliding snow

As a consequence of warming during the day and solar radiation medium-sized and, in isolated cases, large wet and gliding avalanches are possible. This applies especially on steep sunny slopes below approximately 2600 m, as well as on steep shady slopes below approximately 2200 m.

Danger levels

1 low

_____2

2 moderate

3 considerable

4 high

5 very high
