Warning region: Appenzell Alps

Avalanche danger

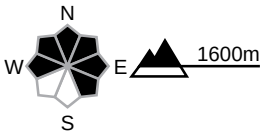

Forecast through: 24.11.2026, 17:00 / Next update: 24.11.2026, 17:00

Moderate (2-)

New snow

Avalanche prone locations

Danger description

The new snow and wind slabs of the last two days represent the main danger. The wind slabs are covered with new snow in some cases and therefore difficult to recognise. Avalanches can in some places be released by people. Mostly they are small. The avalanche prone locations are to be found in particular in gullies and bowls, and behind abrupt changes in the terrain. Careful route selection is recommended.

Danger levels 1 low 2 moderate 3 considerable 4 high 5 very high

Snowpack

New and wind-drifted snow from the last few days was deposited on bare ground. Pronounced weak layers are scarcely present.

Weather review

21.11. 17:00 – 22.11. 17:00
- Snowfall limit: 870 to 1400 m
- Maximum temperature at 2000 m: 1.9 °C
- Fresh snow at 1000 m: Sleet
- Fresh snow at 1500 m: 7 cm
- Wind speed: 10 km/h
- Wind direction: SW

22.11. 17:00 – 23.11. 17:00
- Snowfall limit: 630 to 850 m
- Maximum temperature at 2000 m: -3.6 °C
- Fresh snow at 1000 m: 9 cm
- Fresh snow at 1500 m: 17 cm
- Wind speed: 14 km/h
- Wind direction: W

Weather forecast

23.11. 17:00 – 24.11. 17:00
- Snowfall limit: 610 to 900 m
- Maximum temperature at 2000 m: 1.4 °C
- Fresh snow at 1000 m: 0 cm
- Fresh snow at 1500 m: 4 cm
- Wind speed: 11 km/h
- Wind direction: SE

Outlook

Individual avalanche prone locations for dry avalanches are to be found in particular in extremely steep terrain. Restraint should be exercised because avalanches can sweep people along and give rise to falls.
