

Avalanche danger

Forecast through: 23.11.2024, 17:00 / Next update: 23.11.2024, 17:00

Wind slab

Avalanche prone locations Danger description

The new snow and wind slabs of the last three days can be released by a single winter sport participant. In isolated cases avalanches are medium-sized and in some cases easily released.

The wind slabs are to be evaluated with care and prudence in very steep terrain.

The Avalanche Warning Service currently has only a small amount of information that has been collected in the field, so that the avalanche danger should be investigated especially thoroughly in the relevant locality.

Low (1)

Wet snow

In particular on cut and grassy slopes mostly small gliding avalanches and moist snow slides are to be expected. Restraint should be exercised because avalanches can sweep people along and give rise to falls.

Danger levels

1 low

2 moderate

3 considerable

4 high

5 very high
