

# Avalanche danger

Forecast through: 12.2.2026, 17:00 / Next update: 12.2.2026, 08:00

## New snow, Persistent weak layers

### Avalanche prone locations Danger description

Large quantities of fresh snow and the wind-drifted snow are lying on top of a weakly bonded old snowpack. A large number of natural avalanches are to be expected. They can in many cases reach very large size. In the typical avalanche paths in particular avalanches can reach as far as the valley bottom and endanger transportation routes. Including in starting zones in which avalanches have already been released natural avalanches must be expected.

The snow sport conditions outside marked and open pistes are dangerous.

## Moderate (2)

## Wet snow

### Avalanche prone locations Danger description

Wet snow slides and avalanches are to be expected as a consequence of the rain, in particular on very steep slopes. These can reach medium size. Apart from the danger of being buried, restraint should be exercised in particular in view of the danger of avalanches sweeping people along and giving rise to falls.

Danger levels

1 low

2 moderate

3 considerable

4 high

5 very high
