Warning region: Val d'Entremont - Val Ferret

Avalanche danger

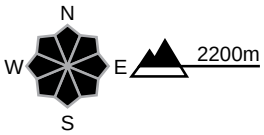

Forecast through: 24.11.2026, 17:00 / Next update: 24.11.2026, 17:00

Considerable (3=)

New snow

Avalanche prone locations

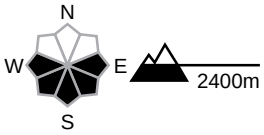

Danger description

Large quantities of fresh snow and the wind-drifted snow of the last two days are in some cases prone to triggering. Single winter sport participants can release avalanches, including large ones.
Backcountry touring calls for experience in the assessment of avalanche danger.

Moderate (2)

Gliding snow

Avalanche prone locations

Danger description

On steep grassy slopes numerous gliding avalanches are to be expected, even large ones.
Areas with glide cracks are to be avoided as far as possible.

Danger levels 1 low 2 moderate 3 considerable 4 high 5 very high

Snowpack

Snow depths are well above average. Over a wide area there is two to three times as much snow as is usual for the time of year. Weak layers prone to triggering are still found mainly in the sometimes thick layers of new and wind-drifted snow from recent days. These will stabilize rapidly.
Above approximately 2600 m, on north- and east-facing slopes, there is still coarse-grained old snow in places at the snow base. This near-ground old snow is now overlain so thickly that fractures in near-ground layers of the snowpack are not very likely.

Weather review

21.11. 17:00 – 22.11. 17:00
- Snowfall limit: 1010 to 1500 m
- Maximum temperature at 2000 m: 2.9 °C
- Fresh snow at 2000 m: 3 cm
- Fresh snow at 3000 m: 7 cm
- Wind speed: 41 km/h
- Wind direction: S

22.11. 17:00 – 23.11. 17:00
- Snowfall limit: 1120 to 1480 m
- Maximum temperature at 2000 m: -0.1 °C
- Fresh snow at 2000 m: 10 cm
- Fresh snow at 3000 m: 19 cm
- Wind speed: 79 km/h
- Wind direction: W

Weather forecast

23.11. 17:00 – 24.11. 17:00
- Snowfall limit: Below 760 m to 1180 m
- Maximum temperature at 2000 m: 2.2 °C
- Fresh snow at 2000 m: 0 cm
- Fresh snow at 3000 m: 0 cm
- Wind speed: 30 km/h
- Wind direction: NW

Outlook

Dry avalanches
The avalanche situation remains delicate. Dry avalanches can be released, even by a single winter sport participant. Backcountry touring and other off-piste activities call for experience in the assessment of avalanche danger and caution.

Wet-snow avalanches
Gliding avalanches are possible at any time. Areas with glide cracks are to be avoided as far as possible.
