

Avalanche danger

Forecast through: 22.12.2024, 17:00 / Next update: 22.12.2024, 08:00

New snow, Persistent weak layers

Avalanche prone locations Danger description

Large quantities of fresh snow and the wind-drifted snow are prone to triggering. Avalanches can be released, even by a single winter sport participant. Additionally in some places avalanches can also be triggered in the old snowpack. Avalanches can reach large size. As a consequence of the heavy snowfall more frequent natural avalanches are to be expected as the day progresses. In the afternoon probably danger level 4 (high) will be reached. Backcountry touring and other off-piste activities call for extensive experience and restraint.

Danger levels

1 low

2 moderate

3 considerable

4 high

5 very high
