

Avalanche danger

Forecast through: 29.4.2024, 17:00 / Next update: 29.4.2024, 17:00

Wind slab

Avalanche prone locations Danger description

As a consequence of new snow and a strong to storm force southerly wind, avalanche prone wind slabs formed at elevated altitudes. Avalanches can be released, even by a single winter sport participant and reach medium size. Backcountry touring and other off-piste activities call for experience in the assessment of avalanche danger.

Moderate (2)

Wet snow

Avalanche prone locations Danger description

As a consequence of solar radiation more frequent small and medium-sized moist loose snow avalanches are to be expected. In the event of prolonged bright spells this applies in particular in the western and central parts of the main Alpine ridge.

Danger levels

1 low

2 moderate

3 considerable

4 high

5 very high
