

Avalanche danger

Forecast through: 9.12.2023, 17:00 / Next update: 9.12.2023, 17:00

Wind slab, Gliding snow

Avalanche prone location Danger description

The fresh and older wind slabs can be released in some cases. Additionally in very isolated cases avalanches can also penetrate deep layers and reach medium size. These avalanche prone locations are very rare but are barely recognisable. Careful route selection is advisable.

In all aspects more medium-sized gliding avalanches are possible below approximately 2200 m. Areas with glide cracks are to be avoided.

Danger levels

1 low

2 moderate

3 considerable 4 high

5 very high
