

Avalanche danger

Forecast through: 25.3.2026, 17:00 / Next update: 25.3.2026, 17:00

Wind slab, Persistent weak layers

Avalanche prone locations Danger description

As a consequence of a strong northwesterly wind, sometimes avalanche prone wind slabs will form in the course of the day. The number and size of avalanche prone locations will increase with altitude. Additionally avalanches can be released in the old snowpack and reach large size in isolated cases. These avalanche prone locations are rare but are difficult to recognise. Caution is to be exercised in particular on little-used, rather lightly snow-covered shady slopes. Defensive route selection is recommended.

Danger levels

1 low

2 moderate

3 considerable

4 high

5 very high
