Warning region: Northern Tujetsch

Avalanche danger

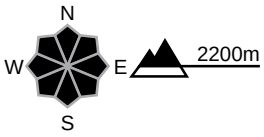

Forecast through: 24.11.2026, 17:00 / Next update: 24.11.2026, 17:00

Considerable (3=)

New snow, Persistent weak layers

Avalanche prone locations

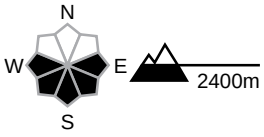

Danger description

The new snow and wind slabs are prone to triggering. Additionally avalanches can also be released in the old snowpack and reach large size. This applies especially on north and east facing slopes above approximately 2600 m. Avalanches can be released, even by a single winter sport participant.
Backcountry touring calls for experience in the assessment of avalanche danger.

Moderate (2)

Gliding snow

Avalanche prone locations

Danger description

On steep grassy slopes numerous gliding avalanches are to be expected, even large ones in isolated cases. Caution is to be exercised in areas with glide cracks.

Danger levels 1 low 2 moderate 3 considerable 4 high 5 very high

Snowpack

Weak layers prone to triggering are present, on the one hand, in the new and wind-drifted snow layers of the last two days. On the other hand, especially on north and east facing slopes above approximately 2600 m, coarse-grained, weak old snow is present at the snow base. It is usually not yet sufficiently covered and can still be triggered by people. These weak layers stabilize only slowly.

Weather review

21.11. 17:00 – 22.11. 17:00
- Snowfall limit: Below 1010 m to 1520 m
- Maximum temperature at 2000 m: 1 °C
- Fresh snow at 1500 m: Sleet
- Fresh snow at 2500 m: 7 cm
- Wind speed: 47 km/h
- Wind direction: W

22.11. 17:00 – 23.11. 17:00
- Snowfall limit: Below 1010 m to 1420 m
- Maximum temperature at 2000 m: -0.6 °C
- Fresh snow at 1500 m: 6 cm
- Fresh snow at 2500 m: 20 cm
- Wind speed: 61 km/h
- Wind direction: NW

Weather forecast

23.11. 17:00 – 24.11. 17:00
- Snowfall limit: Below 1010 m
- Maximum temperature at 2000 m: -0.8 °C
- Fresh snow at 1500 m: 0 cm
- Fresh snow at 2500 m: 2 cm
- Wind speed: 32 km/h
- Wind direction: NW

Outlook

Dry avalanches
The avalanche situation remains delicate. Dry avalanches can be released, even by a single winter sport participant, including in deeper layers. Backcountry touring and other off-piste activities call for experience in the assessment of avalanche danger and caution.

Wet-snow avalanches
Gliding avalanches are possible at any time. Areas with glide cracks are to be avoided as far as possible.
