

Avalanche danger

Forecast through: 22.12.2024, 17:00 / Next update: 22.12.2024, 08:00

Wind slab, Persistent weak layers

Avalanche prone locations Danger description

The new snow and wind slabs will be deposited on the unfavourable surface of an old snowpack. Avalanches can be released, even by a single winter sport participant and reach medium size. As a consequence of the snowfall the prevalence and size of the avalanche prone locations will increase as the day progresses. Whumpung sounds and the formation of shooting cracks when stepping on the snowpack can indicate the danger. Backcountry touring and other off-piste activities call for experience in the assessment of avalanche danger.

Danger levels

1 low

2 moderate

3 considerable

4 high

5 very high
