

Avalanche danger

Forecast through: 29.11.2023, 17:00 / Next update: 29.11.2023, 17:00

No distinct avalanche problem

Individual avalanche prone locations are to be found in particular in extremely steep terrain at elevated altitudes. Restraint should be exercised because avalanches can sweep people along and give rise to falls. The Avalanche Warning Service currently has only a small amount of information that has been collected in the field, so that the avalanche danger should be investigated especially thoroughly in the relevant locality.

Danger levels

 1 low

 2 moderate

 3 considerable  4 high

 5 very high
