

Avalanche danger

Forecast through: 1.4.2025, 17:00 / Next update: 1.4.2025, 08:00

Wind slab, Persistent weak layers

Avalanche prone locations Danger description

The more recent wind slabs are in some cases prone to triggering. They are rather small. They are to be evaluated with care and prudence in steep terrain. Additionally in isolated cases dry avalanches can be released in the old snowpack and reach medium size. These avalanche prone locations are rare and are difficult to recognise. Careful route selection is recommended.

Moderate (2)

Wet snow, Gliding snow

As a consequence of warming during the day and solar radiation medium-sized and, in isolated cases, large wet and gliding avalanches are possible. This applies especially on steep sunny slopes below approximately 2600 m, as well as on steep shady slopes below approximately 2200 m.

Danger levels

1 low

2 moderate

3 considerable

4 high

5 very high
