

Avalanche danger

Forecast through: 29.4.2024, 17:00 / Next update: 29.4.2024, 17:00

Wet snow

Avalanche prone locations Danger description

As a consequence of solar radiation more frequent small and medium-sized moist loose snow avalanches are to be expected. In the event of prolonged bright spells this applies in particular in the western and central parts of the main Alpine ridge.

Danger levels

1 low

2 moderate

3 considerable

4 high

5 very high
