

Avalanche danger

Forecast through: 12.2.2026, 17:00 / Next update: 12.2.2026, 08:00

Persistent weak layers

Avalanche prone locations Danger description

Distinct weak layers in the old snowpack necessitate caution. Avalanches can be triggered in deep layers and reach large size in isolated cases. The avalanche prone locations are prevalent. Remotely triggered avalanches are to be expected. Whumphing sounds and the formation of shooting cracks when stepping on the snowpack and fresh avalanches indicate the danger.

Backcountry touring and other off-piste activities call for extensive experience in the assessment of avalanche danger and restraint.

Danger levels

1 low

2 moderate

3 considerable

4 high

5 very high
