

# Avalanche danger

Forecast through: 1.4.2025, 17:00 / Next update: 1.4.2025, 08:00

## Wind slab, Persistent weak layers

### Avalanche prone locations Danger description

The more recent wind slabs are prone to triggering. They can be released, even by a single winter sport participant. Avalanches can additionally be released in the weakly bonded old snow. These avalanche prone locations are difficult to recognise. They are to be found in particular on very steep north facing slopes. Whumpfung sounds can indicate the danger. Backcountry touring and other off-piste activities call for experience in the assessment of avalanche danger.

## Moderate (2)

## Wet snow, Gliding snow

As a consequence of warming during the day and solar radiation medium-sized and, in isolated cases, large wet and gliding avalanches are possible. This applies especially on steep sunny slopes below approximately 2600 m, as well as on steep shady slopes below approximately 2200 m.

Danger levels

1 low

2 moderate

3 considerable

4 high

5 very high
