

Avalanche danger

Forecast through: 22.12.2024, 17:00 / Next update: 22.12.2024, 08:00

Wind slab

Only a little snow is lying. The small wind slabs represent the main danger. The avalanche prone locations are to be found in particular in extreme terrain and in gullies and bowls, and behind abrupt changes in the terrain. Restraint should be exercised because avalanches can sweep people along and give rise to falls.

Danger levels

 1 low

 2 moderate

 3 considerable  4 high

 5 very high
