

Avalanche danger

Forecast through: 28.11.2023, 17:00 / Next update: 28.11.2023, 17:00

Snow drift

Avalanche prone locations

Danger description

As a consequence of new snow and a strong westerly wind, sometimes easily released wind slabs will form. These are to be found in particular in gullies and bowls, and behind abrupt changes in the terrain. Mostly the avalanches are small. The wind slabs are to be evaluated with care and prudence in steep terrain.

The Avalanche Warning Service currently has only a small amount of information that has been collected in the field, so that the avalanche danger should be investigated especially thoroughly in the relevant locality.

Danger levels

 1 low

 2 moderate

 3 considerable  4 high

 5 very high
