

# Avalanche danger

Forecast through: 29.11.2023, 17:00 / Next update: 29.11.2023, 17:00

## Snow drift

### Avalanche prone locations

### Danger description

As a consequence of new snow and a strong wind, wind slabs formed in the last few days. These are to be found in particular in gullies and bowls, and behind abrupt changes in the terrain. Avalanches can in some places be released by people, but they will be small in most cases.

The wind slabs are to be evaluated with care and prudence in steep terrain.

The Avalanche Warning Service currently has only a small amount of information that has been collected in the field, so that the avalanche danger should be investigated especially thoroughly in the relevant locality.

Danger levels

 1 low

 2 moderate

 3 considerable  4 high

 5 very high
